# **GRFX 1701: Principles of Game Design**

| Instructor           | Course Overview   |  |  |  |
|----------------------|---|--|--|--|
| Cameron Buckley      | Introduction to the practice of moving from game concept through design documentation, prototyping, and testing, including elements of ideation, narrative, |  |  |  |
| Email                | character and world development, game mechanisms, level design, and user experience design.   |  |  |  |
| cbuckley@astate.edu  |   |  |  |  |
|                      | Course Objectives   |  |  |  |
| Office Location      | By the end of the course, students will be able to:   |  |  |  |
| Fine Arts Center 123 | • Compose a design document with accompanying materials for a game proposal platform  |  |  |  |
| Office Hours         | • Create a physical board game prototype including 3D printing board printing and   |  |  |  |
| Friday 10a – 1p      | rule publishing   |  |  |  |
|                      | • Examine existing and peer-designed games, assessing their qualities and identifying their problems using industry-standard terms                          |  |  |  |
|                      | • Design and communicate a compelling ludonarrative and world for a board game  |  |  |  |
|                      | Course Style  |  |  |  |
|                      | This course is uniquely designed to operate as a "board game design studio", where  |  |  |  |

This course is uniquely designed to operate as a "board game design studio", where students are tasked with creating one large project with accompanying materials over the course of the 9 weeks. Students will begin the project the very first week of class, and continue to refine, add, and modify the project.

Our class time will be devoted to demonstrations, lectures, and discussions. Students are expected to come to class with all work completed and any problems ready to discuss and solve.

Remember, this course is about refining and building the game design process skills. Projects may have problems, bugs, and other difficulties, but keep in mind this is all part of the "board game design studio" environment of the classroom.

#### Resources

Rather than use a traditional textbook for this course, we will utilize several free online resources for reference and examples. If you ever need extra help for the

course, these resources will provide you with excellent starting places.

## **Course Schedule**

| Week   | Subject   | Homework for Next Class  |  |
|--------|---|--|--|
| Week 1 | Brainstorming as Problem-Solving and<br>Identification                  | Create a MindMap for your board<br>game project, considering<br>specifically the "problem" your<br>game solves.  |  |
| Week 2 | Board Game Case Study, Essential<br>Characteristics of Successful Games | dy, Essential<br>cessful Games<br>Play a board game, either by<br>yourself or with another player.<br>Create a brief description (300-900<br>words) of the game, the visuals, the<br>mechanisms, the narrative, and the<br>rule design.                  |  |
| Week 3 | Wireframing a Mechanic, The Design<br>Document, The Magic Circle        | Continue working on and refining<br>your board game by creating a<br>design document including a<br>mechanic wireframe.  |  |
| Week 4 | Ludonarrative, World, and Character<br>Design                           | Add the following to your design<br>document: a minimum of 5<br>sketches, 10 inspiration image<br>references, and written descriptions<br>of characters, world, and<br>ludonarrative in your board game.<br>You will present your designs next<br>class. |  |
| Week 5 | Midterm Critique, Peer-to-Peer Design                                   | Taking the information gained<br>from the midterm critique, make<br>edits to your existing game concept<br>and design documents. Begin<br>building your prototype.   |  |
| Week 6 | Level Design, Narrative Flow, Viewer or<br>Player?                      | Continue working on your<br>prototype, finishing your board (or<br>spatial design) prototype by next   |  |

| Week   | Subject   | oject Homework for Next Class   |  |
|--------|---|---|--|
|        |   | class.  |  |
| Week 7 | Aesthetics as Information, Tutorial-izing<br>the Narrative, 3D Printing | Add design swatches to your prototype, and complete your rule sheet prototype.  |  |
| Week 8 | The Pitch, What Works in Your Design?                                   | 'itch, What Works in Your Design?       Finish up your prototype, design document, and pitch for the final presentation next class. |  |
| Week 9 | Final Presentations and Critique  |   |  |

### **Grading Policy**

All work assigned in class is to be completed before the beginning of the next session. In the above schedule, each "Homework for Next Class" will be shown at the beginning of the following class. If a student does not have the homework completed, or has not made sufficient improvements to their project, they will receive a grade deduction for that week's assignment.

All students are expected to participate in discussions both in class and on the class Slack channel. Students are encouraged to help each other (and ask for help) on the class Slack channel, and will be rewarded with extra credit points each time they do so.

The course uses the standard grading scheme:

100-90% = A 89-80% = B 79-70% = C 69-60% = D 59% and Below = F

The course grades are determined as follows:

#### **Participation**

Every class period, there are multiple group discussions. Students are

9 weeks, each worth 5%, 45% of total grade

#### Assignment

7 homework checks, each worth 5%, 35% of total grade

#### **Final Project**

1 Final Project presentation, 20% of total grade

# **Project Description**

Over the course of the semester students will complete one final project with 7 intermediate checks. These checks act as milestones for certain content or conceptual additions and refinements to the project. These checks are detailed above in the **Homework for Next Class** column of our **Schedule**. Keep in mind students are expected to work on this project for the **entirety of the course**, it will be impossible to complete this project in a short timeframe. Time management is an essential element of this project's success.

For this class, you are tasked with creating a physical board game prototype. The prototype will use 3D printed pieces, a fully printed board, and a designed rule sheet/book. These elements can be created using **Fusion 360**, **Illustrator, and Photoshop**, but you are free to use any tools that suit you, such as **Affinity Designer**. All content will be created by you, and you are not allowed to use downloaded files/images.

The project must have the following:

- Printed Board
- 3D Printed pieces
- o Printed rule sheet/book
- Design Document with accompanying materials
  - Sketches
  - Blueprints
  - Wireframe
  - Design process
  - Descriptions of play
  - Narrative description
  - World description
  - Color swatches
- o Pitch

This project includes an important presentation aspect. In the final critique, your game will be played by other students, and we should be able to play a complete round/match of the game without issue. All rules should be explained in the rulebook, without additional input from the presenter.

#### **Rubric for Final Project**

|              | Insufficient                                 | Novice  | Proficient   | Exceptional  |
|--------------|--|---|--|--|
| Technique    | 0 Points<br>Does not fulfill<br>requirements | 1 – 5 Points<br>Student does not<br>fully understand the<br>techniques and does<br>not utilize the tools<br>to their full capacity  | 6 – 15 Points<br>Project may lack<br>refinement or only<br>uses some of the<br>tools, but otherwise<br>the student<br>understands the<br>techniques      | 16 – 20 Points<br>The project shows<br>clear technical<br>finesse and uses all<br>the tools to their<br>fullest capacity                                 |
| Presentation | 0 Points<br>Does not fulfill<br>requirements | <ul> <li>1 – 10 Points</li> <li>The presentation of<br/>the project lacks<br/>cohesion and<br/>displays the<br/>student's lack of<br/>knowledge of their<br/>project and process</li> </ul> | 11 – 29 Points<br>The presentation of<br>the project is<br>complete, but does<br>not use the language<br>of game design and<br>lacks overall<br>cohesion | 30 – 40 Points<br>The presentation of<br>the project is strong<br>and cohesive. The<br>student has full<br>command of the<br>language for game<br>design |
| Concept      | 0 Points<br>Does not fulfill<br>requirements | <ul> <li>1 – 10 Points</li> <li>The project lacks a solid concept or idea. The mechanics feel haphazard or last minute</li> </ul>   | 11 – 29 Points<br>The project has a<br>concept, but it may<br>be uninteresting or<br>unintentional. It<br>does not have a<br>strong direction.           | 30 – 40 Points<br>The project has a<br>very strong concept.<br>Each mechanic<br>clearly indicates<br>consideration of<br>ludonarrative.                  |
