

ASSESSMENT WEBSITE INFORMATION

College: Education

Degree Program: Athletic Training BS

Chair/Director: Jim Stillwell/Amanda A. Wheeler

DATA SAY:

In the Fall and Spring of 2011-2012, the ATEP faculty identified 72% of the assessed skills were not being assessed in the clinical setting for more than 50% of our students.

SO WHAT:

This implies that our students are not developing these skills to the fullest in the clinical experience, and therefore, we are unable to accurately assess our 5 main outcomes via demonstration of understanding of prevention of injury, clinical evaluation and diagnosis, immediate care of injury, treatment rehabilitation, and reconditioning of injury, and organization and administration in athletic training.

HOW WE CHANGED:

All approved clinical instructors were required to attend a more detailed workshop in which instructions/suggestions were given as to how to incorporate this learning and assessment in the clinical experience for all students.

WHAT WE GOT:

The data from the 2012-2013 academic year have not yet been analyzed. Once analyzed, a comparison will be made between the two years, and further recommendations will be made as deemed appropriate.
