

ASSESSMENT WEBSITE INFORMATION

College: Sciences and Mathematics
Chair/Director: Hammerand

Degree Program: Computer Science BA

DATA SAY:

Assessment for the B.A. in Computer Science will in large part mirror that being implemented for the B.S. Additional assessment can be employed for the B.A. in that it requires a minor (typically from the College of Business) as a degree requirement

SO WHAT:

Employer surveys and graduate surveys are being developed for the B.A. as well. The graduate survey will be geared to the degree program itself, while the employer survey will take into account the fact that some employers will have hired B.S., B.A., and M.S. graduates. The student portfolio will also take into account the required minor.

HOW WE CHANGED:

The feedback loop for the B.A. is closed by implementation of these changes, allowing for continuous improvement of the program, utilizing both internal and external inputs.

WHAT WE GOT:

The changes described above are in process; survey results will be available in the spring of 2013, while portfolios reflecting the minor (a relatively new addition to requirements) are still several years from fruition.
